## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, filed 11/17/2003, with respect to the rejection(s) of claim(s) 1-5 and 7-11 under previous cited prior art have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made as followings.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 and 7-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Park et al. (U.S. Pat. #: 6,181,794).

Regarding claim 1, Park et al. ("Park") teaches an echo canceller, as shown in figure 2, comprising:

at least one adaptive filter (i.e., adaptive filter 21) for extracting at least one echo signal from speech signals (col.3, lines 25-27) and for calculating at least one power value of the speech signals (col.7, lines 64-66); and

at least one subtraction means for generating at least one error signal by subtracting the at least one echo signal from the speech signals (col.5, lines 10-18).

Art Unit: 2643

at least one update control means for selectively updating at least one filter coefficient of the at least one adaptive filter in response to the at least one power value and the at least one error signal (col.7, line 66 – col.8, line 4; lines 14-16, and lines 55-59).

Regarding claims 2-5, note col.7, line 57, lines 41-65.

Regarding claim 7, Park teaches an apparatus such as an echo canceller for removing echo components from speech signals in a vocoder as shown in figure 2, the apparatus comprising:

at least one adaptive filter (i.e., adaptive filter 21) for extracting at least one echo signal from speech signals (col.3, lines 25-27) and for calculating at least one power value of the speech signals (col.7, lines 64-66);

a selection means for generating at least one selective signal in response to the at least one power value of the speech signal (col.8, lines 39-52);

at least one subtraction means for generating at least one error signal by subtracting the at least one echo signal from the speech signals (col.10, lines 27-35).

at least one update control means for updating at least one filter coefficient of the at least one adaptive filter when the at least one selective signal provided from the selective means is activated (col.7, line 66 – col.8, line 4; lines 14-16, and lines 55-59).

Regarding claims 8-11, note col.7, line 57, lines 41-65.

***Allowable Subject Matter***

4. Claims 6 and 12-13 allowed.

Art Unit: 2643

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ikeda (U.S. Pat. #: 5,940,455) also teaches the feature of "...at least one update control means for selectively updating at least one filter coefficient of the at least one adaptive filter *in response to the at least one power value and the at least one error signal.*"
